connected to a water pump which is used to recirculate or pump the water 56 through the water discharge device 58. As can be appreciated, the planter 62 may receive water 56 from the water discharge device 58, if desired. The planter 62 further includes wheels 69 attached near the bottom of the planter to allow the planter 62 to be transported without lifting it.--

Please amend the following claims:

A2

1. (Amended) A fountain comprising:

a planter having a hollow interior for storing a quantity of water;

a pump for pumping the quantity of water within the planter;

a water discharge device connected to the pump for discharging the quantity of water;

and

a second planter positioned on and suspended from an exterior surface of the planter.

9. (Amended) A fountain comprising:

A3
Cont.

a planter having a hollow interior for storing a quantity of water the planter having a bottom portion in direct contact with the quantity of water;

a pump for pumping the quantity of water within the planter;

a water discharge device connected to the pump for discharging the quantity of water;

and

a base adapted for having the planter positioned thereon, the base being wider than the planter and for receiving a portion of the quantity of water being discharged from the water discharge device wherein the base is in direct contact with the bottom portion of the planter that is, in turn, in direct contact with the quantity of water.

10. (Amended) The fountain of claim 9 wherein the base is adapted for holding plants or flowers to be watered.

11. (Amended) The fountain of claim 9 wherein the planter has a bottom and the pump is positioned on the bottom.

12. (Amended) The fountain of claim 9 wherein the water discharge device is a fountain head.

13. (Amended) The fountain of claim 9 wherein the water discharge device is a sprinkler head.

14. (Amended) The fountain of claim 9 wherein the water discharge device comprises a tubular post member and a fountain head, the post member for providing water from the pump to the fountain head.

15. (Amended) The fountain of claim 9 wherein the base further comprises a wheel assembly for moving the base and the planter.

16. (Amended) A fountain comprising:
a planter having an upper rim and an interior for storing a quantity of water;
a pump for pumping the quantity of water within the planter;
a water discharge device connected to the pump for discharging the quantity of water;
and

a second planter positioned on the planter and suspended from an exterior surface of the planter along the upper rim, the second planter being wider than the planter, the second planter for holding flowers or plants and for receiving a portion of the quantity of water being discharged from the water discharge device to water the flowers or plants.

17. (Amended) The fountain of claim 16 wherein the planter has a bottom and the pump is positioned on the bottom.
